Exercise1.cpp

Problem: Create a C++ program that will prompt the user to enter the student id, name of the student,

degree, year, and 4 major exam scores (Prelim, Midterm, Semifinal, Final). Thereafter,

the program will calculate and display the total exam score and the average score.

Example Output:

```
Student #: 123456
Name      : Neil
Degree    : BSCS
Year      : 1
Major Exam Scores
   Prelim   : 100
   Midterm : 100
   Semifinal: 100
   Final    : 99
Total Score    : 399
Average Score: 99.75
```
